

Rosenpass Post-Quantum VPN with Minimal Privileges

Marei Peischl with Karolin Varner, Alice Bowman

<https://rosenpass.eu>

Introduction

- Rosenpass is a post-quantum VPN that uses WireGuard for data transport
- This project will reduce the privilege level required for Rosenpass to send post-quantum secure keys to WireGuard
- We will do this using Docker, Micro-VM's (exceptionally small virtual machines), and broker architectures to sandbox the Rosenpass software
